

LEAD GENERATION

Enterprise AI Lead Generation Playbook

High-velocity prospect discovery, multi-source enrichment, and automated CRM pipeline ingestion.

EXECUTIVE SUMMARY

Building a consistent enterprise pipeline requires automated lead capture across high-intent public sources. This playbook covers Craigslist and directory scraping, data enrichment, and dual JSON/CSV CRM synchronization.

1 High-Velocity Prospecting Pipeline

Autonomous prospecting agents query commercial directories, service marketplaces, and local listings, filtering targets based on verified contact information and buyer intent scores.

2 Production Implementation & Schema

```
// Automated Dual Lead Retention Pipeline (Node.js)
function saveLead(lead) {
  const jsonPath = 'C:\\Users\\futur\\gemini_workspace\\leads.json';
  const csvPath = 'C:\\Users\\futur\\gemini_workspace\\leads.csv';
  appendJson(jsonPath, lead);
  appendCsv(csvPath, [lead.name, lead.email, lead.phone, lead.source]);
}
```

3 Standardized Lead Storage Schema

Maintaining clean, deduped records in dual formats ensures that your data is immediately ready for cold email automation, dialer software, or executive spreadsheet audits.

```
Lead-harvester • Prospecting Run CONNECTED

[QUERY] Target: Medical Clinics & Commercial Practices
✓ [FOUND] 42 qualified leads identified in region
✓ [ENRICH] 38 valid direct phone numbers + 35 email contacts
✓ [SYNC] Dual write completed to leads.json and leads.csv
[STATUS] Ready for outbound campaign execution
```

4 Key Takeaways & Best Practices

✓ Dual-Write Standard

Always synchronize records to both leads.json and leads.csv to support both automated tools and manual review.

✓ Deduplication Rules

Enforce unique email and phone constraints to prevent contacting the same organization twice.

✓ Verification Filters

Drop records lacking active phone or verified email before queueing them for sales outreach.

✓ Continuous Ingestion

Schedule recurring background cron sweeps to capture new business listings within 2 hours of posting.
